Acute and Recovered Function Patients in CROWNWeb

- CROWNWeb exists only for chronic ESRD patients.
- This is determined by the treating nephrologist when he/she signs the attestation on the CMS-2728 Form that in their medical judgement the patient is end stage.

<tr>
<td>Patient can “Recover Function” as the discharge reason</td>
<td>Must follow the steps below to remove patient from CROWNWeb</td>
</tr>
</tbody>
</table>

- If the patient has no submitted 2728 form, no clinical data, and was not admitted to other units:
  - Search for the patient in CROWNWeb;
  - Click on CROWN UPI Number and select Edit Patient; and
  - Click on the Delete button. This will delete the patient PERMANENTLY from CROWNWeb

- If the patient has no 2728 form but does have admission records to more than one unit:
  - Contact the Network to perform the deletion

- If the patient has no 2728 form, but does have submitted clinical data:
  - Your only option is to discharge the patient using the discharge reason ACUTE.
  - Please contact the Network to perform the deletion.

- If the patient has a 2728 form submitted:
  - Your only option is to discharge the patient using the discharge reason ACUTE.
  - This will allow for the patient to be admitted as NEW ESRD Patient at some point in the future with a new Date of First Dialysis.

- What do I do if there is an ESRD patient with a 2728 form who Recovers Function months later?
  - Discharge the patient using the discharge reason RECOVERED FUNCTION. If the patient loses function again in the future, then the patient can be readmitted as a Restart. If the readmission date is greater than one (1) year from the Recovered Function date, then a re-entitlement Form 2728 will be required.
